

ReStore<sup>SM</sup>

Your Best Defense  
Against Data Loss  
and Costly Exposure.

Off-site Vaulting,  
Inventory Management,  
24/7/365 Access.

**recall**<sup>TM</sup>  
Your Information. Securely Managed.

ReStore keeps vital information safe by providing secure off-site storage, rotation and protection of backup media. The loss of key data – due to natural disaster, misconduct or facility destruction – can professionally devastate any company. An insurance policy can't prevent you from going out of business, but trusting your backups to ReStore can!

## ReStore

It's difficult to imagine what a fire, flood or earthquake could do to your business. Loss of priceless data – regardless of the cause – can totally devastate a business. But with Recall's ReStore offering, you can take careful precautions against disastrous interruptions provided by an expert and reliable third party.

### Your best defense against data loss and costly exposure

Loss of priceless data – regardless of the cause – can totally devastate a business. In studies of companies without a viable continuance plan, less than 10 percent survived a major data loss. An alarming 40+ percent never reopened, and 50+ percent closed within two years. Even if companies survive, the expense can be astronomical. Computer downtime can easily cost a business hundreds of thousands of dollars per hour. That's why Recall's ReStore service is such a highly valued safety measure. It provides 24/7 protection against disastrous interruptions – along with peace of mind that can only come from disciplined, third-party accountability.

### The vital first step in contingency planning: Retrieval of redundant data assets

There is no way to measure the seriousness of a company's dependence on its information. Risk management is more critical than ever – but significant tools, human resources and administrative skills are needed for the job. This is what ReStore supplies. Through this service, your vital system data is securely collected and stored off-site in environmentally controlled media vaults to ensure accessibility when and where it's needed.

### Meticulous tracking and inventory control

ReStore ensures the timely rotation of your media, and provides unrivalled inventory accuracy. It begins when Recall collects your backups and transfers them to our vaults. Using bar code technology, all media is scanned as it comes in and goes out, establishing a precise audit trail of individual tape movements. You can easily verify your holdings electronically. ReStore activity files are always current and offer exact details. Plus you have web access to off-site inventory listings, media return dates, reporting functions and service requests.
